

Abstract:

In the case of a vehicle seat (1), in particular rear seat or rear seat bench, having a seat part (2) and having a backrest (3) which has a foldover function brought about with an electric drive, the foldover function bringing about a folding over of the backrest (3) or of a backrest part (4, 5) relative to the seat part (2), an adjustment of the inclination and the folding over are to take place in a simple and convenient manner. This is achieved by the electric drive (6) having an inclination-adjusting function, it being possible for the adjusting speed of the electric drive (6) to be changed in such a manner that a different speed can be set in each case for the inclination-adjusting function and for the foldover function.
